Prior authorization (PA) is required for select preferred anti-diabetic, non-insulin agents subject to clinical criteria. Payment will be considered under the following conditions:

- 1. Request adheres to all FDA approved labeling for requested drug and indication, including age, dosing, contraindications, warnings and precautions, drug interactions, and use in specific populations; and**
- 2. For the treatment of Type 2 Diabetes Mellitus, a current A1C is provided; and**
- 3. Requests for combination therapy with a DPP-4 inhibitor containing agent with a GLP-1 receptor agonist containing agent will not be considered; and**
- 4. Requests for non-preferred antidiabetic, non-insulin agents subject to clinical criteria will be authorized only for cases in which there is documentation of previous trials and therapy failures with a preferred drug in the same class. Additionally, requests for a non-preferred agent for the treatment of Type 2 Diabetes Mellitus must document previous trials and therapy failures with at least 3 preferred agents from 3 different drug classes at maximally tolerated doses.**

The required trials may be overridden when documented evidence is provided that use of these agents would be medically contraindicated.

Requests for weight loss, which is not a covered diagnosis of use, will be denied.

IMPORTANT NOTE: In evaluating requests for prior authorization, the consultant will consider the treatment from the standpoint of medical necessity only. If approval of this request is granted, this does not indicate that the member continues to be eligible for Medicaid. It is the responsibility of the provider who initiates the request for prior authorization to establish by inspection of the member's Medicaid eligibility card and, if necessary, by contact with the county Department of Health and Human Services, that the member continues to be eligible for Medicaid.
