Prior authorization is required for PCSK9 Inhibitors. Payment for non-preferred PCSK9 Inhibitors will be authorized only for cases in which there is documentation of a previous trial and therapy failure with a preferred agent, when available for the submitted diagnosis. Payment will be considered under the following conditions: 1) Patient is 18 years of age or older (or, for Homozygous Familial Hypercholesterolemia (HoFH), patient is 13 years of age or older); and 2) Current use of a statin and documentation of adherence to prescribed lipid lowering medications for the previous 90 days is provided (further defined below, by diagnosis); and 3) Is to be prescribed as an adjunct to a low fat diet; and 4) A baseline and current lipid profile is provided. Baseline lipid profile is defined as a lipid profile obtained prior to pharmacologic therapy; and 5) Documentation patient has been counseled on importance of abstinence from tobacco and, if a current smoker, be encouraged to enroll in a smoking cessation program; and 6) Is prescribed by a lipidologist, cardiologist, or endocrinologist. 7) The 72-hour emergency supply rule does not apply to PCSK9 Inhibitors. 8) Prescriber and dispensing pharmacy will educate the patient on proper storage and administration. Improperly stored medications will not be replaced. 9) Lost or stolen medication replacement requests will not be authorized. 10) Goal is defined as a 50% reduction in untreated baseline LDL-C. 11) Is prescribed for one of the following diagnoses: Heterozygous Familial Hypercholesterolemia (HeFH), Clinical Atherosclerotic Cardiovascular Disease (ASCVD), or HoFH. The required trials (excluding the statin trial) may be overridden when documented evidence is provided that use of these agents would be medically contraindicated.

Quantity Limits:

Praluent/Repatha for HeFH or ASCVD: One syringe/pen/autoinjector per fill (requires refill every 14 days) Repatha for HoFH only: One three-pack per month

Initial Requests (please see below for renewal requests):

HeFH or ASCVD Drug and Dose Requested:

- Praluent 75mg every 2 weeks for 8 weeks (4 doses)
- Repatha 140mg every 2 weeks for 8 weeks (4 doses)

HoFH Drug and Dose Requested:

Repatha 420mg (3x140mg autoinjectors) every month for 3 months

Is patient on a low fat diet: Yes No

Has patient experienced ≥ 50% reduction in untreated baseline LDL-C with current therapies? ☐ Yes ☐ No

Attach baseline (prior to pharmacologic therapy) and current lipid profiles.

Clinical Atherosclerotic Cardiovascular Disease (ASCVD)

- 1) History of MI, angina, coronary or other arterial revascularization, stroke, TIA, or PVD of atherosclerotic origin; and
- 2) Unable to reach goal LDL-C with a minimum of two separate, chemically distinct statin trials used in combination with other lipid lowering medications.

Trials are defined as: concurrent use of a maximally tolerated dose of a statin (including atorvastatin and rosuvastatin), plus ezetimibe (Zetia) 10mg daily, plus cholestyramine daily.
